

---

## AREAS OF USAGE

---

For all products made of smooth natural and synthetic leather: sofas, chairs, shoes handbags, suitcases, jackets, trousers, motor cycle gear, car seats, riding gear, belts,...

For raw, untreated materials and oiled wood: cupboards, tables, floors, toys, lunchboxes,...

Also suitable for the surface care of natural stone areas: kitchen counter, stone floors, bathrooms,...

---

## USAGE

---

Using a cotton cloth or a cellulose sponge, apply some balsam, then apply it sheerly on the desired areas and products. As the product is absorbed immediately and does not leave any lubricating film, you do not need to additionally brush or polish it afterwards. However, for additional shine, especially for shoes, this may be useful.

As Uni Sapon Leather balsam does not have a proper colour itself, it can be applied easily on light coloured leather, as well as on very clear types of wood.

---

## IMPORTANT

---

Not suitable for the care of wild leather, full-grain leather, as well as structured textile leather.

---

---

## RECOMMENDATIONS

---

If the leather is stained, you may also clean it with Uni Sapon Degreaser (=genuine soft soap) or with the Uni Sapon universal paste (especially suited for light coloured leather).

As all ingredients comply with the guidelines of natural cosmetic products, you may also nourish rough elbows, heels, hands,...

Very appreciated as skin protection in winter (face, hands,...

---

## NOTE

---

At the bottom of the can, there is a small ball made of EM-ceramic, which supports the product's durability.

---

## Leather balsam

With this unique product leather care becomes a great pleasure! Cold pressed jojoba oil and natural lanolin deeply permeate into the leather and leave it with a vibrant shine and smoothness. Biological bees wax and carnauba wax make the leather resistant and protect it against external influences and stains. For our oil component, we exclusively use native jojoba oil, which is the only oil derived from plants that – from the chemical point of view – is a wax and does not become rancid. This way, your leather products will receive the optimal care.
